## **DETAILED ACTION**

### ***Inventorship***

1. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

3. Claims 23, 26-31 and 36 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sunshine et al. (6,085,576) in view of Goodman et al. (6,495,892).
4. Claims 23, 26-31 and 36 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sunshine et al. (6,839,636) in view of Goodman et al. (6,495,892).

These rejections were applied in the previous Office Action (mailed 09/19/08). They remain in effect. Please see Response to Arguments below.

#### ***Response to Arguments***

5. Applicant's arguments filed 03/18/09 have been fully considered but they are not persuasive. Applicant has argued that the addition of the passivation layer from Goodman to the device of Sunshine would result in an inoperable device. The Examiner respectfully disagrees and notes that Sunshine teaches a sensor having metal elements on a substrate. The sensor disclosed in Goodman contains both polysilicon layers as well as a layer of glass placed over metal layers on a substrate (column 12, lines 8-20). The polysilicon and glass materials disclosed by Goodman are the same materials as recited by Applicant in Applicant's claims and disclosure (See claims 26-27 and Page 9, lines 22-32 of Applicant's Specification). Therefore, the Examiner submits that the addition of the layer from Goodman would not result in an inoperable device. One of ordinary skill in the art could incorporate the additional layer(s) in a manner that the resulting sensor could continue to operate to detect analytes.

In addition, the Examiner notes that the claim merely requires that the passivation layer to be attached to the second sensing element. Applicant has argued that the passivation layer would prevent exposure to the sensor, but this is beyond the scope of the claim. Applicant not claimed any particular configuration or property of the layer other than to recite that it is attached to the sensor. Therefore, the mere placement of the passivation layer **anywhere** on the sensor element would meet the claim limitations as currently written. This is shown in Figure 4 of Goodman – a layer of polysilicon and a layer of glass attached to the sensor.

### ***Conclusion***

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
